Sports Dugouts & Team Shelters

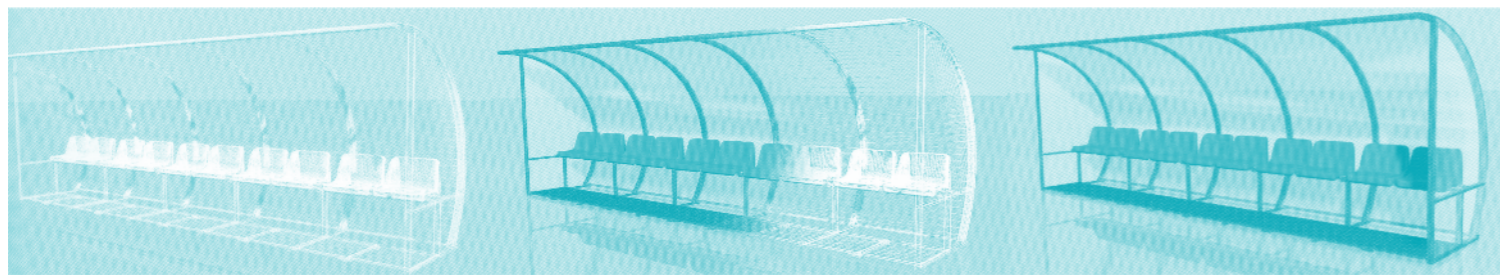

Dugouts Ireland Team Shelters: Designed to complement or be an attractive addition to sports grounds facilities, for clubs of all sizes. The innovative and attractive bench can be made in different sizes from as little as two seats (special order) to our most popular twelve seat option. The referee's model can be fitted with a small table. Everything about the structure is strong and without compromise.

Dugouts Ireland Team Shelters Available in 2 - 12 Seat Options

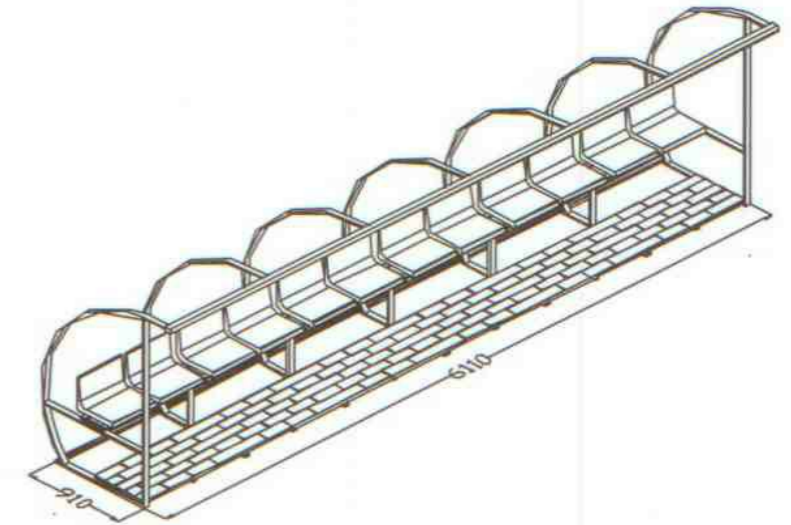

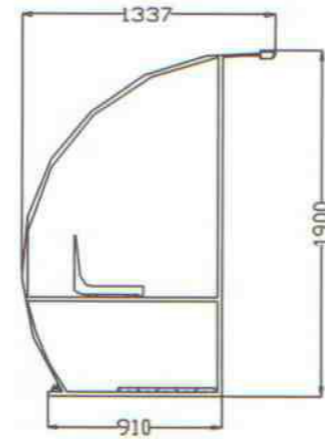

Dugouts Ireland Team shelters are built using Hot Dipped Galvanised steel profile, transparent acrylic panels and extruder polycarbonate panels. We have designed our team shelter range with two things in mind user comfort and affordability: it's height (1.90m) allows the user to stand under the shelter. The rubber floor surface isolates the feet from contact with the ground. Individual seat width space is made comfortable by means of injected moulded plastic seats

The innovative and attractive bench can be made in different sizes from as little as two seats (special order) to our most popular twelve seat option. The referee's model can be fitted with a small table.

*Installation & delivery services
available throughout UK and Ireland*

Dugouts Ireland Team Shelter – 6m (12 seater)

Product features:

The team shelter is made of a galvanized steel profile 50.20.2 to provide an efficient and long lasting protection of all its structure's metallic pieces.

6 mm methacrylate side panels.

The rear panels are made of 6 mm celular polycarbonate, its upper edge is designed for driving rain backwards and giving shelter to the players in case it rains.

The seats are M4 injected polipropilene with anti UV treatment, screwed and fixed to the galvanized steel structure in a permanent way avoiding possible vadalism actions.

The floor is built on a galvanized steel lattice, above it rubber recycled tiles (Versatile) are placed. They have a great durability and resilience, being at the same time non-slipping and permeable avoiding the direct contact with cold or wet floor.
